

## EF-X3R Chorus Echo with BBD Analog Chorus & Spring Reverb

The EF-X3R is the latest offering in Echo Fix's line of tape delays. Built in Australia, to the highest quality, the EF-X3R includes many of our most requested features and builds on the momentum and trust gained after 3 years of making the EF-X2.

## 100% Analog

Now with an Analog BBD Chorus & Analog Spring Reverb, the EF-X3R boasts a 100% analog signal path.

## Stereo Output via Direct Head Outputs

Individual outputs for each head offer flexibility never-before-seen in a tape echo, with the ability to achieve a classic Stereo Ping-Pong delay effect by panning each head externally.

## Unmatched Reliability

On top of this, we've implemented a new auto tape stop circuit to extend tape life.

## Same Team, Same Peace of Mind

For nearly 15 years, we've been keeping tape echos alive. Now that we make our own, our standards are higher than ever. Rest assured that your machine will be the most capable, reliable tape echo on the market, supported by a team with some of the best customer service in the industry.

## It's Alive

If you've been in a room with one of our units, you'll know what we mean by this. Used as an effect, they simply make everything sound better. But turn up the echo volume, dial in some feedback and watch as our unit self-oscillates into life and becomes an instrument more than an effect. The EF-X3R will change the way you make music.

## PRODUCT FEATURES:

- ◆ 3RU 19" Rack Mountable with sliding drawer system for easy tape replacement
- ◆ Direct playback head outputs allowing for external panning for stereo ping pong delays from a mono source
- ◆ Analog BBD Chorus with rate and depth controls
- ◆ Analog Spring Reverb
- ◆ Independent SOS switching for longer delay time (1.2 seconds)
- ◆ Direct WET output at rear for Reverb/Chorus
- ◆ Balanced Input and Output at rear
- ◆ Auto tape stop when no audio signal present to extend tape life
- ◆ CV Control for Motor Speed and Feedback level (0-5v) via compatible Expression Pedals
- ◆ Bass and Treble Controls (Echo Signal)
- ◆ Vintage Guitar/Line FET Preamp (Front Panel)
- ◆ High / Low Output level switch (Front Panel Output)
- ◆ Four echo playback heads (including SOS head)
- ◆ Motor ON/Switch for tape slow down effect
- ◆ Mute the reverb, echo and chorus signal via remote foot switches
- ◆ Comes with a worldwide-compatible, 100 - 240v power supply (no step-down or other transformers required)
- ◆ Two front Panel colour options - Silver or Black
